Give a definition of a buffer: A buffer is a solution containing either a weak acid and its salt or a weak base and its salt, which is resistant to changes in pH. (chemistry.about.com) If you...

~~Pre-lab Questions – Household Product Buffers~~

Give a definition of a buffer. A buffer is a solution of a weak acid-base pair that resists change in pH. If you titrate acetic acid with sodium hydroxide, the resulting products are the acetate ion, the sodium ion, and water (see Figure 1) . At a certain point, the reaction mixture contains acetic acid (the weak acid) and acetate ion (its conjugate base) in solution, producing a buffer effect.

~~Pre-lab Questions – Buffering Household Products~~

Buffers are solutions that resist changes in pH when acids or bases are added. In order to accomplish this, a buffer must contain both an acidic and a basic component. These two components should...

~~Pre-lab Questions – Household Products and Buffers!~~

Household Products and Buffers! Many household products contain buffering chemicals such as citric acid, sodium carbonate, sodium benzoate, and phosphates or phosphoric acid. The lab begins with an introductory... 14-Lab 14 - Buffers in Household Products - Google Docs Results (Cont.) Alka-Seltzer initial pH: 6.59 Tomato Paste initial pH: 4.30 acid, solid

If you want to funny

~~Buffers In Household Products Prelab Answers~~

Because cranberry juice and grapefruit had the same acid (citric acid), we compared our graph by the length of its buffer reign. Since cranberry juice had a longer buffer region (around 32mL) than grapefruit (around 26 mL) by about 6mL, this depicts that cranberry juice was a better buffer. (referring to the graphs)
