Rounding fractions helps students to understand fractions a little better and can be applied to estimating answers to fractions questions. For example, if one had to estimate $1 \frac{4}{7} \times 6$, they could probably say the answer was about 9 since $1 \frac{4}{7}$ is about $1 \frac{1}{2}$ and $1 \frac{1}{2} \times 6$ is 9.

The first time kids discover that there's more to math than whole numbers, they are likely to be a tad confused. And sometimes that confusion extends throughout the entirety of elementary school, where an initial introduction to concepts like numerators and denominators is followed by comparing fractions, adding and subtracting fractions, multiplying fractions, simplifying fractions and so on.
