Physical Chemistry Study**

Physical chemistry is the study of how matter behaves on a molecular and atomic level and how chemical reactions occur. Based on their analyses, physical chemists may develop new theories, such as how complex structures are formed. Physical chemists often work closely with materials scientists to research and develop potential uses for new materials.

The optimized geometries, harmonic vibrational frequencies, and energies of the three cyclic structures of the thymine–water complex are computed using density functional theory (B3LYP) combined with the 6-31++G(d,p) basis set. The proton affinity of the oxygen atoms and the deprotonation enthalpy of the NH bonds of thymine are computed at the same level and compared with recent data on ...
