This paper deals with the possibility of using fresh concrete waste as recycled aggregates in concrete. An experimental program based on two variables (proportion of fine aggregates replacement

and proportion of coarse  
aggregates replacement)  
was implemented. The  
proportions of  
replacement were 0%,  
50%, and 100% by mass  
of aggregates.

This paper presents environmental benefits of recycling industrial plastic wastes into macroplastic fibers for reinforcing concrete.

Detailed life cycle assessment (LCA) for the production of 100% recycled polypropylene (PP) fibers was conducted and
