Twist Of The

The twist of a carpet is

defined as the number  
of times the fibers are

turned (or twisted) in a

one-inch length,

represented by a

number. For example,

strands that are twisted

6 times in a one-inch

length have a twist

number of 6. This

number is sometimes

referred to as the

TPI—turns per inch.

Twisting fiber imparts strength to a yarn. It makes the fibers harder to pull apart lengthways and the yarn therefore harder to break. You can twist in either direction. If you hold a length of fiber one end and twist the far end to the left you get an S twist in your yarn.
