Weather is the present condition of a

Online Library Weather Climate Answer Key

place with respect to the atmospheric pattern determining the pressure, precipitation and hotness or coldness of that area. It is determined by the temperature, humidity, rainfall, wind speed etc. Sun is the most influencing factor of the weather. Climate is the average weather pattern of a place taken over a period of 25 years.

Weather and Climate | 7th Grade
Worksheets PDF | Grade 7 ...

Weather is greatly affected by factors like temperature, humidity, air pressure, cloudiness, precipitation, etc. On the contrary, temperature and precipitation are the two key factors which influence climate. While the weather is assessed for a short period, i.e. for day or week by the meteorological department.

Conversely, the climate is assessed

over the course of many years.

Difference Between Weather and
Climate (with Comparison ...

Climate refers to the average weather conditions in a place over many years (usually at least 30 years, to account for the range of natural variations from one year to the next).

Climate And Climate Change With
Answer - Kiddy Math

The simple answer is "time." Weather is what is happening in the atmosphere, the mixture of gases around the Earth, at a certain time and place. Weather changes constantly. Air masses move. Fronts form when two air masses of different temperatures with different moisture contents meet.

Online Library Weather Climate Answer Key

This lesson uses two cases studies, CFCs and acid rain, to show the sometimes negative effects of human influence on the environment. We joke around in class a lot about how, whenever there's a question about, as New York state puts it, human impact, the answer is universally - "humans are destroying the environment." While this is often a (sad) fact, students also learn in this lesson in what ...
